TMA

# Third-Party Application Maintenance, IT TMA for Performance and Security

Explore the offerings of Website Maintenance, Third Party Application Maintenance, or IT TMA with Yusonet.

Delegate the corrective, preventive, and evolutionary maintenance of your software, applications, website, e-commerce platform, or mobile application.

TMA

# What is Third-Party Application Maintenance?

IT TMA refers to the outsourcing of maintenance for the company's software, websites, and applications, which may be either complete or partial. Yusanet provides ongoing support for your operational systems (websites/apps) following their development to address your requirements.

Yusanet provides a customized website maintenance and IT TMA service designed to fulfill your requirements.

Third-Party Application Maintenance (TMA informatique) is a website maintenance solution offered by Yusanet.

# What is Third-Party Application Maintenance?

Yusanet is capable of conducting application maintenance on:

- Frameworks PHP (Symfony, Laravel, Silex)
- JavaScript Framework (Node.js),
- Frameworks: .NET, Java
- Front-end frameworks (React, Angular, Vue.js)
- CMS platforms, including Drupal, WordPress, Sitecore, and Sitefinity,
- e-commerce: Drupal Commerce, WooCommerce, PrestaShop, Magento, Sylius...

# The complexities of application maintenance

Your website serves as a gateway to the world, significantly influencing the perception of your products or services. Consequently, it is essential that its content, modules, and plug-ins remain current.

Every business requires consistent application maintenance of its website to:

- to introduce new products or services
- enhance user experience
- expedite and enhance procedures
- ensure the protection of the service and data
- to optimize your visibility in search engines
- to foster engagement and generate opportunities
- to transform and produce income
- to enhance your visibility, engage and retain your customers

# The essential aspects of TMA Informatique

Five elements are crucial in maintenance management:

## Scalability

- Incorporating additional functionalities
- Enhanced UX/UI design and user experience
- Optimization of the application and website.

## Security

- Mitigating risks related to system vulnerabilities
- Optimal performance through the updating of plugins and software utilized.

## Freedom

Refocusing on the core business by delegating IT maintenance.

## Availability and visibility

Outage management for continuous visibility and access to your services.

## Proactivity

- Advice
- Skill
- Expertise
- Audit
